

REMARKS

There are no claim amendments at this time.

The Applicant has amended Figure 1 to correct a minor oversight that occurred during the formalization process. In particular, the output device 120 is shown coupled to the processor 140, when it should be coupled to the input/output controller 130. This correction is fully supported by the originally filed written description, and no new matter is added. For example, the Applicant's paragraph #0023 recites: "The computing environment 105 receives voice samples from the voice input device 110 and sends identification information (or imposter information) to the output device 120." Paragraph #0024 continues: "The input/output controller 130 receives voice samples from the voice capture device 112 for processing and sends identification data (or imposter data) to the output device 120."

The Applicant has also corrected minor typographical errors in the specification.

Favorable action is solicited.

Respectfully submitted,
Ryan Rifkin
